Drug Calculations: The Easy Way does just that: It shows you a technique that works on any drug calculation problem you will face on any nursing math test—nursing school math test, NCLEX math test, or job application math test. Never again get that dreaded feeling when you read questions such as:

Drug Calculations: The Easy Way eBook: McGill, Damon

Drug Dosage Calculation Formulas. To calculate the number of tablets, use the following formula: Strength required / Stock strength = Number of tablet(s) required. Or another way this drug dosage formula can be expressed is: What you want / What you've got = Number of tablet(s) required. To calculate the volume dose for liquid medicine, use this formula: (Strength required / Stock strength) × Stock volume = Volume dose required

Drug Dosage Calculations | How to guide + Quiz | KnowledgeDose

The only correct way to write it is 0.5. Even if the decimal gets lost, it will look like 05, causing others to double check where the decimal is. For our above example, the answer is 3500mg. We would not write it as 3500.00mg, 3.500mg, or 03500mg. Simply write it as 3500mg. Step 6: Check your work.
