A confidence set is a random subset covering the true parameter value with probability at least  $1 - \alpha$ . Let  $C(X)$  be the confidence set.  $C(X) = \{\theta : \delta(X, \theta) \leq c\}$ . The set of parameter values corresponding to hypotheses that can not be rejected. Example.  $y_{ij} = \mu + \tau_i + \beta(x_{ij} - \bar{x}_{i.}) + \epsilon_{ij}$

Basic Statistical Concepts

In our Statistics Fundamentals course, you'll get in introduction to statistics and how this mathematical discipline is used in data science. You will learn several techniques for sampling data such as random sampling and cluster sampling. You will also learn about concepts such as discrete variables and random variables in the context of frequency distributions, and the different types of charts and graphs you might use to visualize frequency distributions.

An Introduction to Basic Statistics and Probability – p. 4/40. Example. Suppose we roll two die and take their sum.  $S = \{2,3,4,5,\dots,11,12\}$   $\Pr(\text{sum} = 5) = \frac{4}{36}$ . Because we get the sum of two die to be 5 if we roll a (1,4),(2,3),(3,2) or (4,1). An Introduction to Basic Statistics and Probability – p. 5/40.

We can: (1) estimate population parameters; and (2) test hypotheses about these parameters. In this module we'll talk about the first type of inferential statistics: estimation by means of a confidence interval. A confidence interval is a range of numbers, which, most likely, contains the actual population value.
