Total Knee Arthroplasty In a total knee replacement, both sides of your knee joint are replaced. The procedure takes 1 to 3 hours: Your surgeon makes a cut down the front of your knee to expose your kneecap. This is then moved to the side so the surgeon can get to the knee joint behind it.

Knee replacement - NHS - How it is performed - NHS

In total knee replacement or total knee arthroplasty (TKA), the end of the femur bone and end of the tibia are removed and replaced. The knee is the largest joint in the body that consists of the following: Femur (lower end of the thighbone) Tibia (the upper end of the shinbone) Patella (the kneecap) The ends of these three bones are covered with a smooth substance called the articular cartilage that protects the bones and enables joint movement.

What Is Total Knee Arthroplasty (TKA)? - MedicineNet

Knee replacement surgery — also known as knee arthroplasty (ARTH-row-plas-tee) — can help relieve pain and restore function in severely diseased knee joints. The procedure involves cutting away damaged bone and cartilage from your thighbone, shinbone and kneecap and replacing it with an artificial joint (prosthesis) made of metal alloys, high-grade plastics and polymers.

Knee replacement - Mayo Clinic

Where To Download Total Knee Arthroplasty

Total knee arthroplasty (TKA) or total knee replacement (TKR) is a orthopaedic surgical procedure where the articular surfaces of the knee joint (the femoral condyles and tibial plateau) are replaced. There is at least one polyethylene piece, placed between the tibia and the femur, as a shock absorber.
